DETAILED ACTION

Information Disclosure Statement

The examiner has considered the items listed in the Information Disclosure

Statement. A signed copy of Form 1449 (substitute) is enclosed with this office action.

Drawings

1. Figures 1, 2, 16 and 17 should be designated by a legend such as --Prior Art--because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The Specification is objected to for the following reasons: the "Detailed Description of the Preferred Embodiments" fails to provide numerals for especially those Drawings that described the embodiments of the invention, while those numerals included in Detailed Description of the Invention pertain to Drawings that described the prior art. In its present form Applicant has not at all provided said numerals: see, for instance the absence of any numerals referred to with regard to the cross-sectional views of Figures 13, 14, 15, 17, 29 and 30; while a discussion of Figures 16 and 17, being an illustration of the prior art, do not even belong in Detailed Description of the

Art Unit: 2826

Invention, but instead belong in Background of the Invention. Furthermore, the same deficiency is rampant in the Background of the Invention, in which no numerals for Figure 2 are included at all. Finally, the active layer has not been identified, neither by numeral, nor even in its position. Therefore, it is not even clear where the light originates. Applicant should provide a description of each claimed element including its numeral in the Drawings, but without introducing new matter.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular, "the traveling path of the emitted light" (claim 1, line 5) is indefinite in the absence of any claimed active layer (nor is said active layer disclosed: see objection to the Specification).
- 4. Claims 7-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular, said high power nitride-based light-emitting diode (LED) both is claimed to have a sacrificial layer (line 1) and not to have a sacrificial layer (line 9) in the final structure, which renders claim 7 and all claims dependent thereon indefinite. Applicant is reminded that only the final structure is of patentable weight in the present device invention.

Art Unit: 2826

5. The term "high" in *claims* 7-16 is a relative term which renders the claim indefinite. The term "high" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Tadatomo et al (US 2004/0113166 A1). The following art rejection is provided to the best of examining possibility within the context of the noted indefiniteness (see above). Tadatomo et al teach a nitride based LED (title) comprising: a substrate 1; a light extraction layer 10a (see par. [0112] and Figure 1b) grown on the substrate; and a nitride semiconductor epitaxial layer 3/A/4 (see paragraphs [057], [060] and [0161]; Figure 1b), wherein the traveling path of the emitted light can be changed by the light extraction layer to avoid absorption by the epitaxial layer (see [0062]) and to emit from the diode (i.e., the light emitting diode) to (thereby inherently) improve the external quantum efficiency, and the external quantum efficiency is improved by matching the refraction index between the light extraction layer and the substrate (see [0113]).

On claim 2: the substrate is made of Al2O3 (sapphire). ([062]).

On claim 3: the substrate alternatively is of SiC (cf. [0002]).

Art Unit: 2826

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Erchak et al (6,831,302 B1). The following art rejection is provided to the best of examining possibility within the context of the noted indefiniteness (see above). As mentioned under the rejection under U.S.C. paragraph 112 "high" in "high power" renders the claim indefinite and will be left out of consideration. Furthermore, the sacrificial layer is not part of the final structure and will be left out of consideration. Erchak et al teach (Figure 1) a nitride-based LED (see title) comprising: a substrate 134 (col. 9, I. 40-43), a nitride semiconductor epitaxial layer on the substrate (132/130/128) (col. 9, I. 25-57), a substrate with high thermal conductivity 126 (col. 9, I. 40-57), and a binding layer (col. 22, I. 24-30) between the light-emitting structure of the nitride semiconductors and the substrate with high thermal conductivity.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johannes P. Mondt whose telephone number is 571-272-1919. The examiner can normally be reached on 8:00 - 18:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan J. Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
